

# EAST WEST UNIVERSITY

## Online jobsite

**By**

Kamrul Hasan  
ID: 2010-2-60-024

Supervised by  
Dr. Md. Nawab Yousuf Ali

Associate Professor

Department of Computer Science & Engineering  
East West University

The project has been submitted to the Department of the Computer Science & Engineering at East West University in the partial fulfillment of the requirement for the degree of Bachelor of Science in Computer Science and Engineering.

May, 2015

## DECLARATION

The project has been submitted to the Department of the Computer Science & Engineering, East West University in the partial fulfillment of the requirement for the degree of Bachelor of Science in CSE performed by me under supervision of Associate Professor Dr. Md. Nawab Yousuf Ali, Dept of CSE at East West University. This is also needed to certify that, the project work under the course '**Project Work (CSE-499)**'. I, hereby, declare that this project has not been submitted elsewhere for the requirement of any degree or diploma or any other purposes.

Signature of the candidate

-----

**(Kamrul Hasan)**

# Letter of Acceptance

The Project entitled **Online Jobsite** submitted By Kamrul Hasan, Id :2010-2-60-024 to the department of computer Science and Engineering, East West University, Dhaka Bangladesh is accepted as satisfactory for the partial fulfillment of the of the requirement for the degree of Bachelor of Science in Computer Science and Engineering on May 14, 2015.

## Board of Examiners

1. -----  
Dr. Md. Nawab Yousuf Ali  
Associate Professor (Project supervisor)  
Department of Computer Science & Engineering  
East West University, Dhaka, Bangladesh
  
2. -----  
Dr. Shamim H. Ripon  
Associate Professor (Chairperson)  
Department of Computer Science & Engineering  
East West University, Dhaka, Bangladesh

In this project, we develop requirement analysis and design of an online jobsite. We have to develop this system for jobseeker and company. We believe this information management system will definitely help jobseeker and company to share information and work smoothly. We have analyzed the included necessary functions in our system. To make things clear about jobseeker information, our automation system will be effective for other jobseeker and company.

It has been great pleasure for me to develop Web Application for **Online Jobsite**. I have gathered sufficient knowledge and experience during this project.

I would like to thank my honorable teacher and supervisor of this project, Dr. Md. Nawab Yousuf Ali Associate Professor, Department of Computer Science and Engineering, East West University who guided me to proper analysis of the system and helped to develop an elegant and efficient system.

It was a great pleasure to study and work with many gifted people who influenced us in many ways. First of all, I would like to thank my project Supervisor Dr. Md. Nawab Yousuf Ali. He does not only give me the great idea, but also encouraged me to seek out the clearest and deepest description of theoretical ideas as well as experimental findings. I am very grateful to him for his continuous support, advice and guidance.

Finally I would like to convey my Special thanks to my parents whom have always given me tremendous Support. Without their love and encouragement .I would not had achieve this far.

## Chapter 1

### Introduction

The jobsite is a web application where a number of jobs are posted in different categories and a candidate can apply to the selected job efficiently. The online job ports deals between employee and employer. It provides the candidates ability to register to this application and search for jobs, manage their accounts. Each candidate will have their own account. On the other hand companies that are willing to publish the jobs for their company can register to the jobsite and get their own account created and can post jobs to the site's database. Registered companies can add or remove jobs and these jobs can be seen by various candidates and they can contact the company through the contact details. The main aim of this web application is to make a good web application that can make the job search option easy for everyone who is inserted.

#### 1.1 Motivation:

For my project I consider the online jobsite as my target object. In our country there are few jobsites but they having some limitations such as:

- The web applications are not utilized properly by reducing the field level work
- The users can't efficiently apply for a job.

#### 1.2 Purpose of the Project

The system tends to replace the existing system for the recruitment process which is not efficient, lengthy process and time consuming. This system is more user friendly than existing system that is why employer can easily access the system and collect their required information. Not only the employer but also the administrators can easily access their information. The main purpose of the system will be efficient candidate searching, efficient job apply by the candidate.

1

### 1.3 Objective

An online job portal where the employer's register with the website and put up jobs which are vacant at their company where as the job seekers can register them at the website and search jobs for them.

### 1.4 Scope

This system provides the recruiting people with all the necessary information to apply for the jobs and the candidate to view the entire category job in detail. It provides the users with all the necessary privileges to access and modify the data intended for them. Following are the scopes of the developed system that are elaborately discussed:

➤ **For Admin:**

- **Manage user's info:** This module captures all the personal information of an employer or an employee. Admin can also edit, active, inactive or delete all the users for necessity purpose.
- **Manage Category info:** Using module admin can insert a category in the system. Also an admin can also edit or delete the category item.

➤ **For Employer:**

- **Insert Detail:** An employee can register and can insert the company's full details as well as the job details related to that company.
- **View candidate Information:** This system shows that the employer can see some basic information of the candidates without going for full details.

2

➤ **For Employee:**

- **Insert Information:** By this system employee can register and can insert some basic information which will help an employer to see in the job applications.
- **Submit CV Efficiently:** The system allow the registered employee to apply on the selected job post from the job detail view page by only entering the email address and pressing the submit button.

## 1.5 Outline

- Introduction
- Existing System
- Requirement Analysis
- Design Specification
- Conclusion and Future work

## **Chapter 2**

# **Existing System**

### **2.1 Existing Feature:**

The features of the existing systems are listed below:

- View and edit the company profile online from the personal administration space.
- View and edit the employee profile.
- Manage and edit the job ads at anytime from the personal administration space.
- Consult the list with the employee's applied to a specified job ad that sent by a company.
- Consult and search the database with the employee's resumes.
- Apply online to the job ads on the website.

### **2.2 Challenges of existing system:**

There are some challenges of the existing system. Some are mentioned below:

- Display full details of a company profile
- Display a specific category job.

- Display a specific company job.
- Display a specific matching list from candidates that a company is searching for.

### **2.3 Proposed System:**

The proposed system will provide the following activities of the users:

#### Administrator Activities:

- Administrator can manage the job category.
- Administrator can manage Post job.
- Administrator can manage the Employer.
- Administrator can manage the Employee.
- Administrator can manage the content of the site.

#### Employee Activities:

- Employees can Registration in the jobsite.
- Employee can view job details.
- Employee can apply on a job.

Employer Activities:

- Employers can Registration for post job.
- Employer can manage post job.
- Employer can view applicant resume.

5

## **Chapter 3**

# **Requirement Analysis**

### **3.1 Requirement Analysis:**

This web based job system required the following requirements. This has mainly three actors. Those are Admin, Employer and Employee. In a job portal service Company holder is known as Employer and Jobseeker is known as Employee.

#### **3.1.1 Data Requirement**

During requirement analysis the following data have been identified for a job system:

- At first each person need to register himself/herself as an employer or an employee for accessing the user's necessary information. They also have a user id and password. They can login to the system from the web using their id and password.
- Admin need to login to the system to operate the system. Admin has an individual or unique login user id and password. Through this id and password admin can login to the system.
- An employer can post a job for a definite time.

- Admin can update all the information of the registered users. Any registered member can be deactivated from activate mode or activated from deactivate mode. They can also be deleted by the admin.
- Admin can update the category list of the jobsites. An admin can edit or delete a category from the job category list. Admin can also insert a new category menu in the category list.

6

- Employee can look for a job from a selected category.
- Employee can search a full job details in the category list. Employee can also print the list from the job detail page. They can also apply on that job by only putting their email address in the selected area if he/she is a registered member.
- Employee can update profile image, full details and can also attach a cv in their portfolio.
- An employer can post a job with full details of that job. They can also delete the job and update any portfolio in the details.
- Employer can see the details of how many applications are posted for that post. They can search with the given criteria from the candidate list. Finally they can select the shortlisted candidate's cv from the search list.

### **3.1.2 Process Requirement**

The following process requirements are identified for job system:

- A valid login is required for all process to be performed. A valid login is required for every registered users and admin. All of them have a valid user id and password. System will authenticate their valid login.
- After valid login employer and employee can check his/her information, can see personal information and can check job posting information.

- Admin can login to the system. Admin can view, delete and update all members' information. Admin can also enter new category in the list.

7

### **3.2 Physical Design**

The physical design relates to the actual input and output processes of the system. This is laid down in terms of how data is input into a system, how it is verified or authenticated, how it is processed, and how it is displayed as In Physical design; the following requirements about the system are decided.

- Input requirements
- Output requirements
- Storage requirements
- Processing Requirements

Put another way, the physical portion of systems design can generally be broken down into three subtasks-

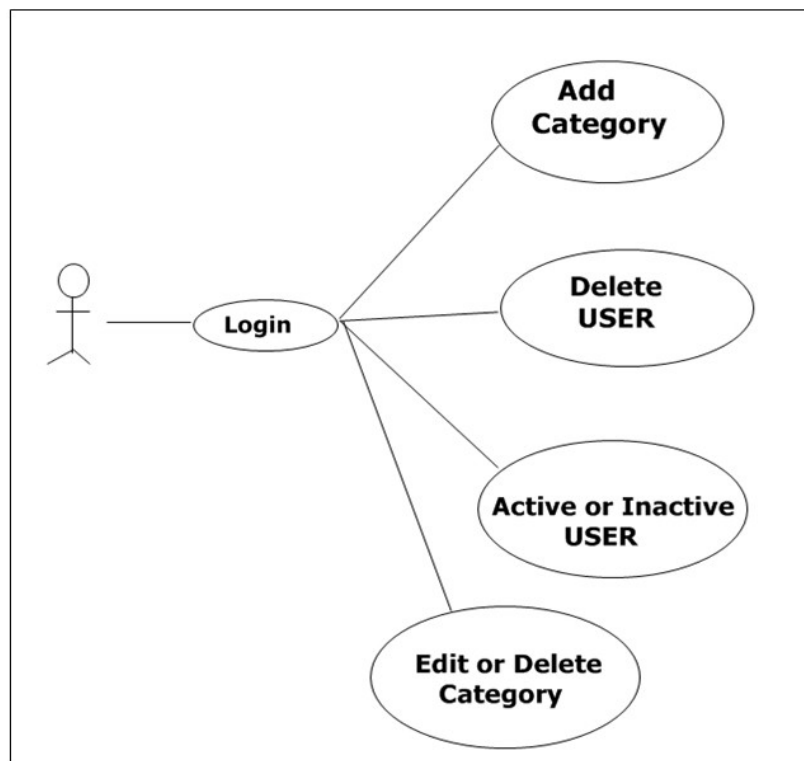

- User Interface Design
- Data Design
- Process Design

### 3.3 Use Case Diagram

#### 3.3.1 Use Case Diagram for Administrative Management

The use case diagram for administrative management is shown in figure 3.1

**Fig 3.1 :Use case diagram for administrative management**

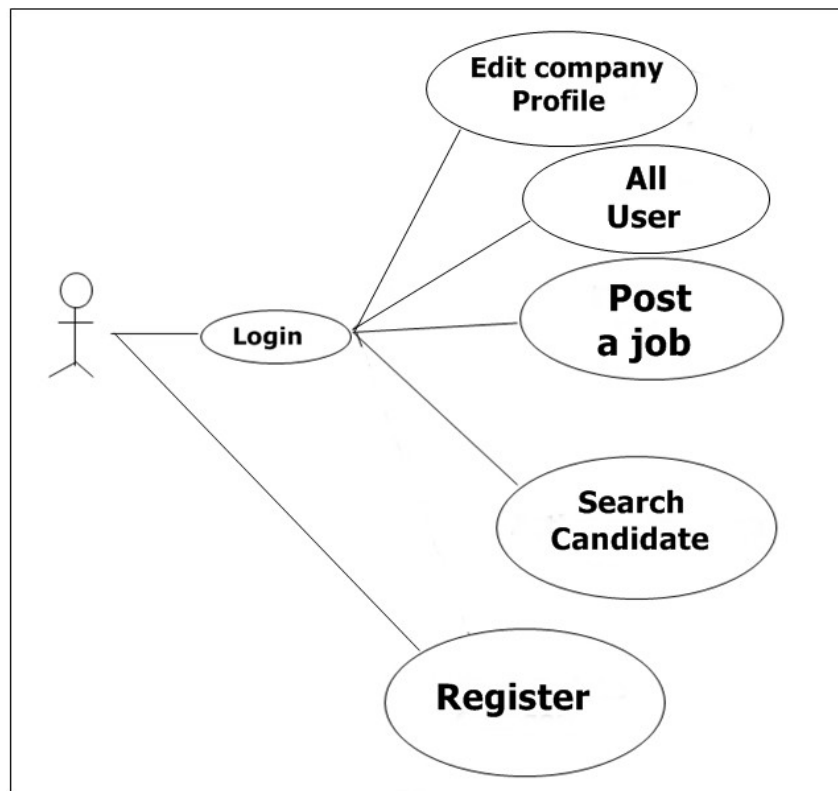

**Description:** This is the use case diagram of an admin. This diagram shows which works are done by the admin.

- **Login:** The admin use the login part to perform the administrative works.
- **Add category:** Admin can add a category in the system. To perform this action admin must need to login to the system.

- **Edit or Delete category:** Admin can control the add or delete part of a category. But the admin must login to perform the action.
- **Active or Inactive user:** Admin can keep a user active or inactive if the admin feels any necessity to perform any further action for the user.
- **Delete user:** Admin can delete user if he feels to perform any action for further purpose.

### 3.3.2 Use Case Diagram for Employer Management

The use case diagram for Employer management is shown in figure 3.2

**Fig 3.2 :Use case diagram for employer management**

**Description:** This is the use case diagram of an employer. This diagram shows which works are done by the employer.

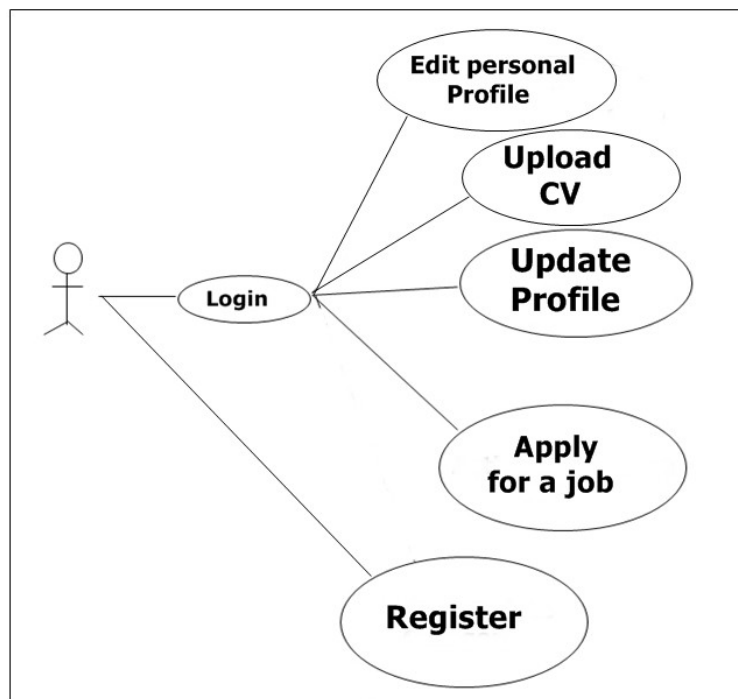

- **Register:** The users can perform the general registration to have an access as a registered user that named employee.
- **Login:** The employer uses the login part to perform the necessary actions.
- **Post Job:** The employer can post a job in the site with detail menu related to the job. But the employer must need to login to do the performance.

- **Edit Company Profile:** The employer can edit the company profile. There they can update their logo, banner, map and contact details.
- **View All Users:** The employer can view all the users detail and cv who wants to get an enrollment for the job post that are posted by the employer.
- **Search Candidate:** The employer can search the exact candidate they are searching for by some selective searching before going for the CV.

10

### 3.3.3 Use Case Diagram for Employee Management

The use case diagram for Employee management is shown in figure 3.3

**Fig 3.2 :Use case diagram for employee management**

**Description:** This is the use case diagram of an employee. This diagram shows which works are done by the employee.

- **Register:** The employee can perform the general registration to have an access as a registered user.
- **Login:** The employee uses the login part to perform the necessary actions.
- **Apply for a Job:** The employee can go for the entire category list to view the jobs that are posted and can apply to that job efficiently by submitting the email id.
- **Edit Personal Profile:** The employee can edit the personal profile. There they can update their name, address, contacts and all other details.

- **Update Profile:** The employee can register first to login and then all the profile information can be updated by the employee. But the employee must login to do the perform
- **Upload CV:** The employee can upload a CV in the profile of their own. They can upload a doc file or pdf file or a text file in their own profile list

### **3.4 Software requirements**

For installing the system, we mainly required the following software, installed on the hosting system.

#### **3.4.1 Web Server**

- Apache (Xampp server v 2.5)

#### **3.4.2 Database Language:**

- MySQL

#### **3.4.3 Server Side Language**

- Php

#### **3.4.4 Visual Design**

- Sublime Text (v 2.0.2)

### **3.5 Software Implementation**

To implement this software the tools are used fully open sources. So that there are no costing involves developing this software. For designing this project HTML, CSS, JAVASCRIPT are used which is open source. Apache web server is used as web server. PHP is used for database coding. MySQL is used as database server.

#### **3.5.1 HTML**

HTML is short form of **Hyper Text Markup Language** and it is a language that are used to create electronic documents, especially pages on the World Wide Web that contain connections called hyperlinks to other pages. Every web page you see on the Internet, including this one contains HTML code that helps format and show text and images in an easy to read format. Without HTML a browser would not know how to format a page and would only display plain text with no formatting that contained no links. [1]

#### **3.5.2 PHP**

PHP is probably the most popular scripting language on the web. It is used to enhance web pages. With PHP, you can do things like create username and password login pages, check details from a form, create forums, picture galleries, surveys, and a whole lot more. If you've come across a web page that ends in PHP, then the author has written some programming code to liven up the plain, old HTML. PHP is known as a server-sided language. That's because the PHP doesn't get executed on your computer. But on the computer you requested the page from. The results are then handed over to you, and displayed in your browser. [2]

#### **3.5.3 PHP CodeIgniter Framework**

CodeIgniter is an Application Development Framework - a toolkit - for people who build web sites using PHP. Its goal is to enable to develop projects much faster than you could if you were

writing code from scratch, by providing a rich set of libraries for commonly needed tasks, as well as a simple interface and logical structure to access these libraries. Code Igniter lets you creatively focus on your project by minimizing the amount of code needed for a given task. [3]

### **3.5.4 ION AUTH**

Ion auth is a simple and lightweight authentication library for the code igniter framework. This was built as github project and now is used worldwide by programmers and web developers using PHP codeigniter. This is a well organized authentication system. [4]

13

### **3.5.5 Apache Server (XAMPP)**

The Apache HTTP Server, commonly referred to as Apache is a web server application notable for playing a key role in the initial growth of the World Wide Web. Apache is developed and maintained by an open community of developers under the auspices of the Apache Software Foundation. Most commonly used on a Unix-like system, the software is available for a wide variety of operating systems, including Unix, FreeBSD, Linux, Solaris, Novell NetWare, OS X, Microsoft Windows, OS/2, TPE, OpenVMS and eComStation. Released under the Apache License, Apache is open-source software.

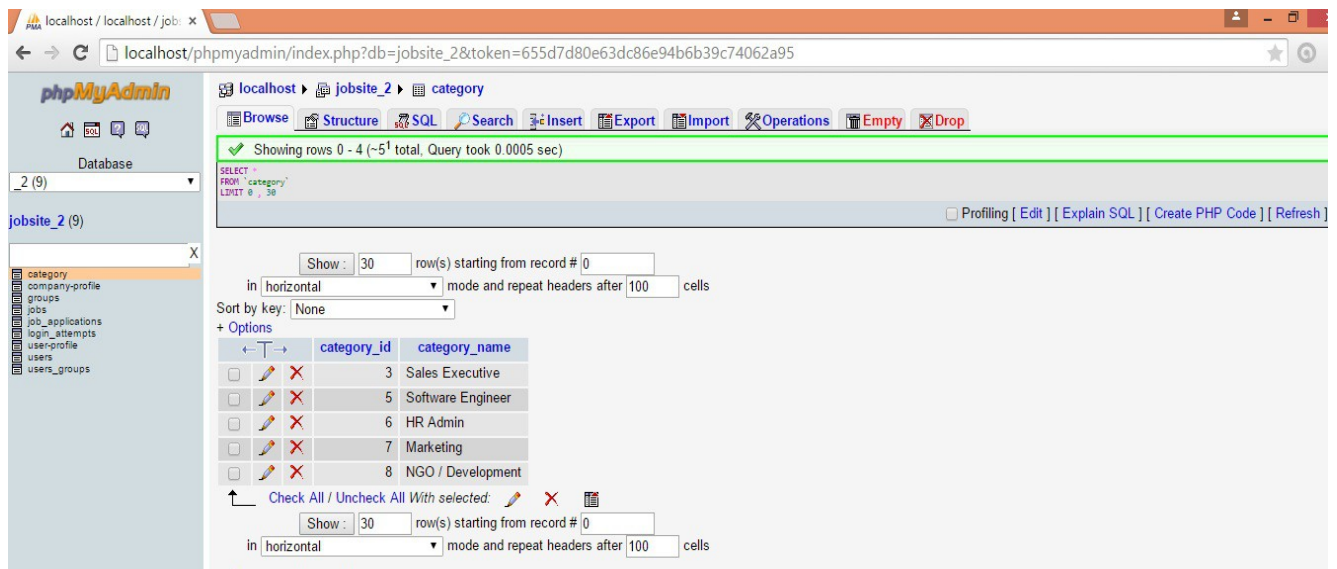

### **3.5.6 Editor (Sublime Text)**

**Sublime Text** is the web development tool that lets you efficiently design, develop and maintain standards-based websites and applications. **Sublime text** provides a powerful combination of visual layout tools, application development features, and code editing support.

### 3.6 Database Implementation

After getting the requirement of a logical design and physical design of our database, we can move to the implementation stage. In general, implementing our physical design involves defining the various objects and enforcing the constraints on the data relationships.

#### 3.6.1 Database of category Information

The screenshot shows the phpMyAdmin interface for the 'jobsite\_2' database. The 'category' table is selected, and the following data is displayed:

category_id	category_name
3	Sales Executive
5	Software Engineer
6	HR Admin
7	Marketing
8	NGO / Development

Figure: 3.4 Databases for Category Information

#### 3.6.2 Database of Company Profile Information:

## Chapter 4

# Design Specification

### 4.1 Interface

A critical aspect of systems design is to create the user interface to the new system. Input and output design focuses on the content of that interface – the specific fields that should be included in screens and reports that are viewed by the users. Once the content is determined, the format for human-computer interaction (HCI) is determined. The user interface (UI) is the way the system talks to the users, using screens/forms, reports, and error messages. During interface design developers identify procedures for each system activity and the required inputs for those activities. These required inputs become screens or forms. User involvement is critical during these design activities.

### 4.2 User Interface

#### 4.2.1 Home Page

The home page of the jobsite system is shown in figure 4.1

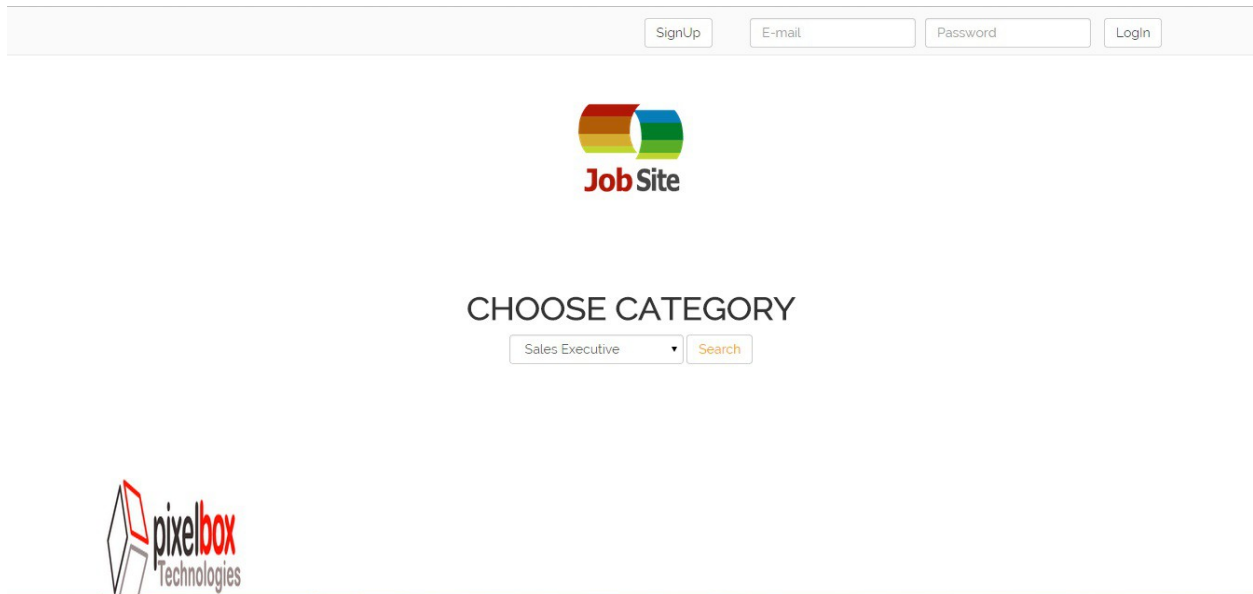

Figure 4.1: Home page

**Description:** This is the home page for jobsite system. In the top menu there is Registration and Sign in part and in middle there are category part. In the bottom part there are the company's job circular given.

#### 4.2.2 Registration Page

The sign up or registration page of the jobsite system is shown in figure 4.2

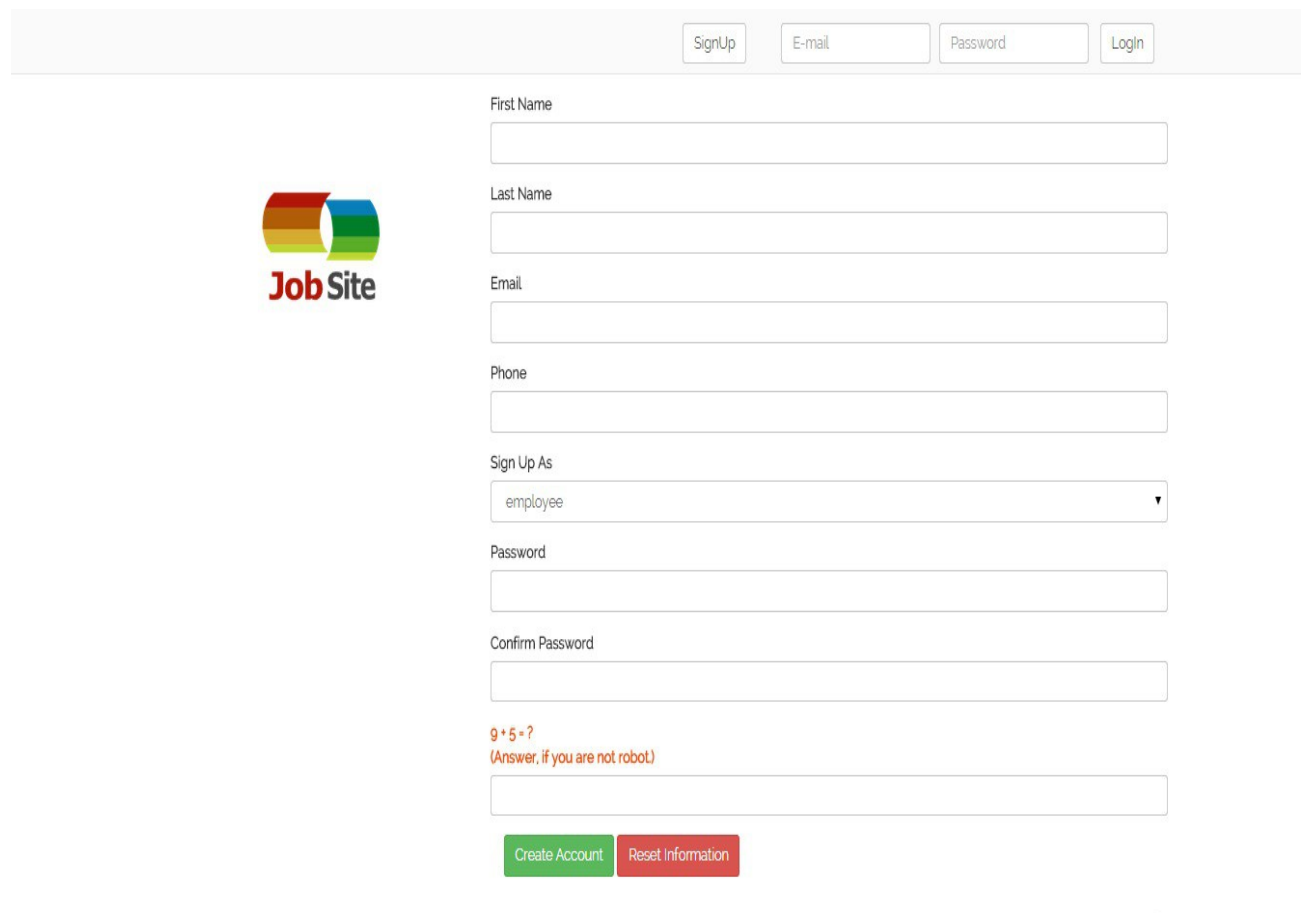

Figure 4.2: Registration page

**Description:** This is the registration page for jobsite system. In the top menu there is Sign in part and in the middle part, the registration process is given. If a person fills the form and submits, then he or she becomes a employer or employee of the site. Then he/she get a valid id and password to enter his/her user page.

### 4.2.3 Category Page

The Category page of the jobsite system is shown in figure 4.3

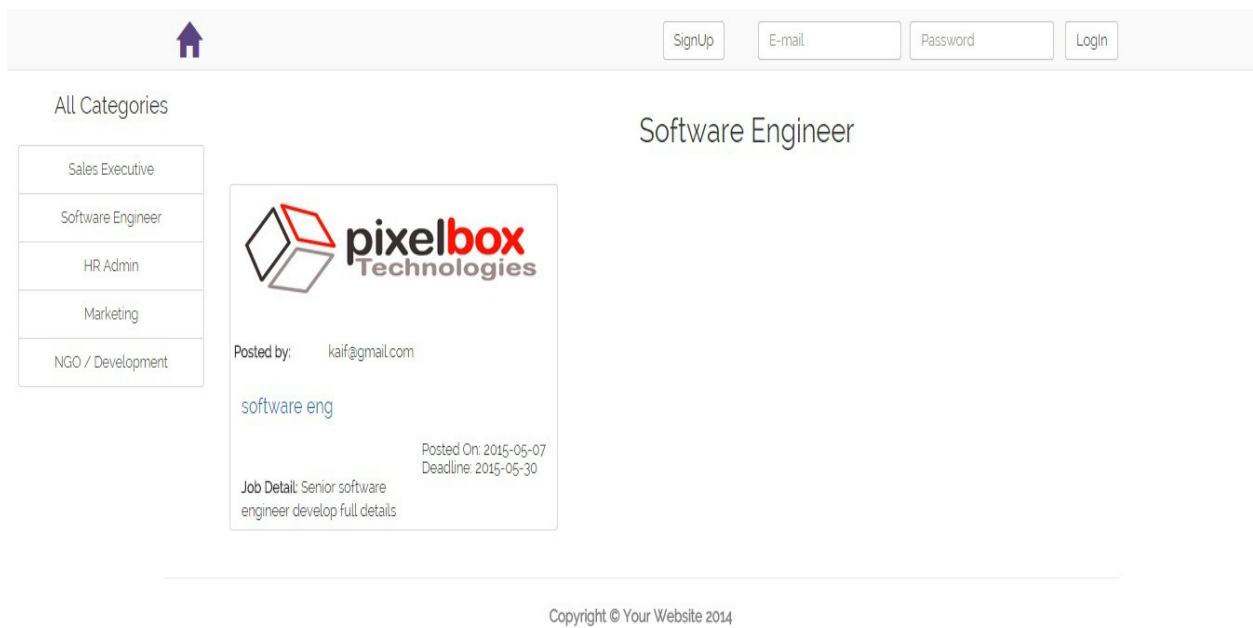

Figure 4.3: Category page

**Description:** This is the Category page for jobsite system. In the top menu there is Sign in part and in the left side of the middle part, the category list is given. If a person clicks any category, then he or she can see if there is any job circulated for that category on the right middle part. [5]

#### 4.2.4 Employer Home Page

The employer's home page of the jobsite system is shown in figure 4.4

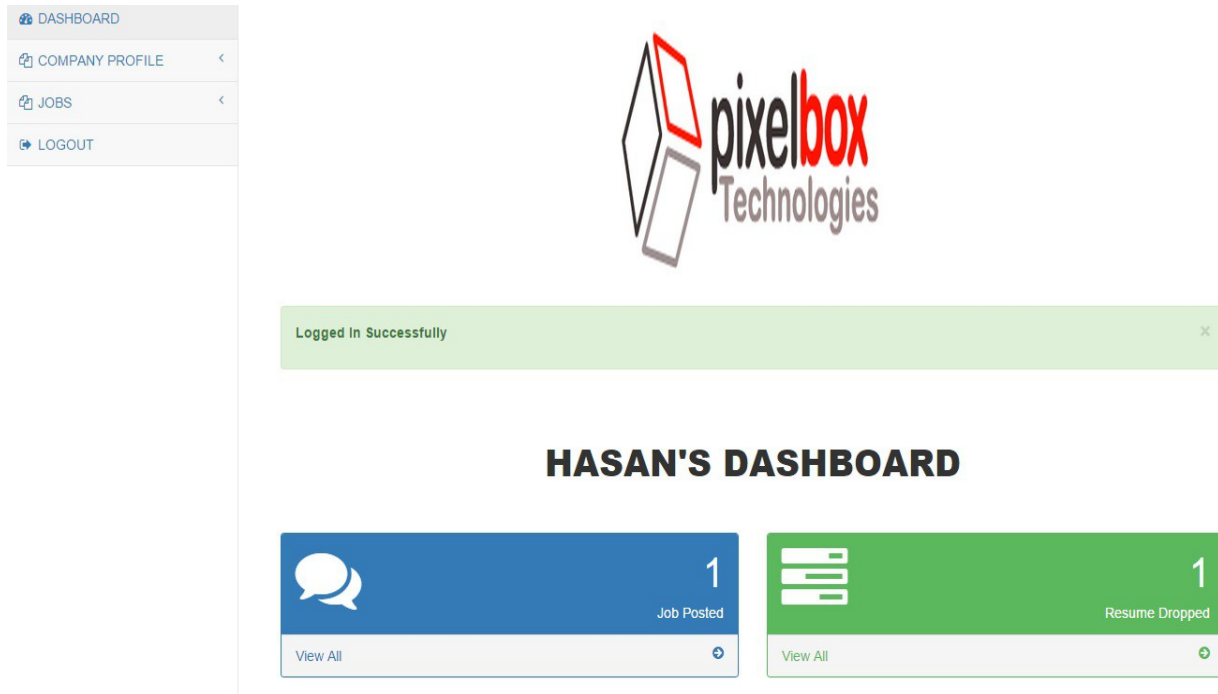

Figure 4.4: Employer's home page

**Description:** This is the employer's home page for jobsite system. In the left side of the view, the dashboard is given. If an employer clicks any point, then he/she moves to another section. Also an employer's home page shows the logo of their company and in the bottom there shows the total job posts and total resume that are deposited by the candidates. [5]

#### 4.2.5 Employer Company Logo

The employer's company logo of the jobsite system is shown in figure 4.5

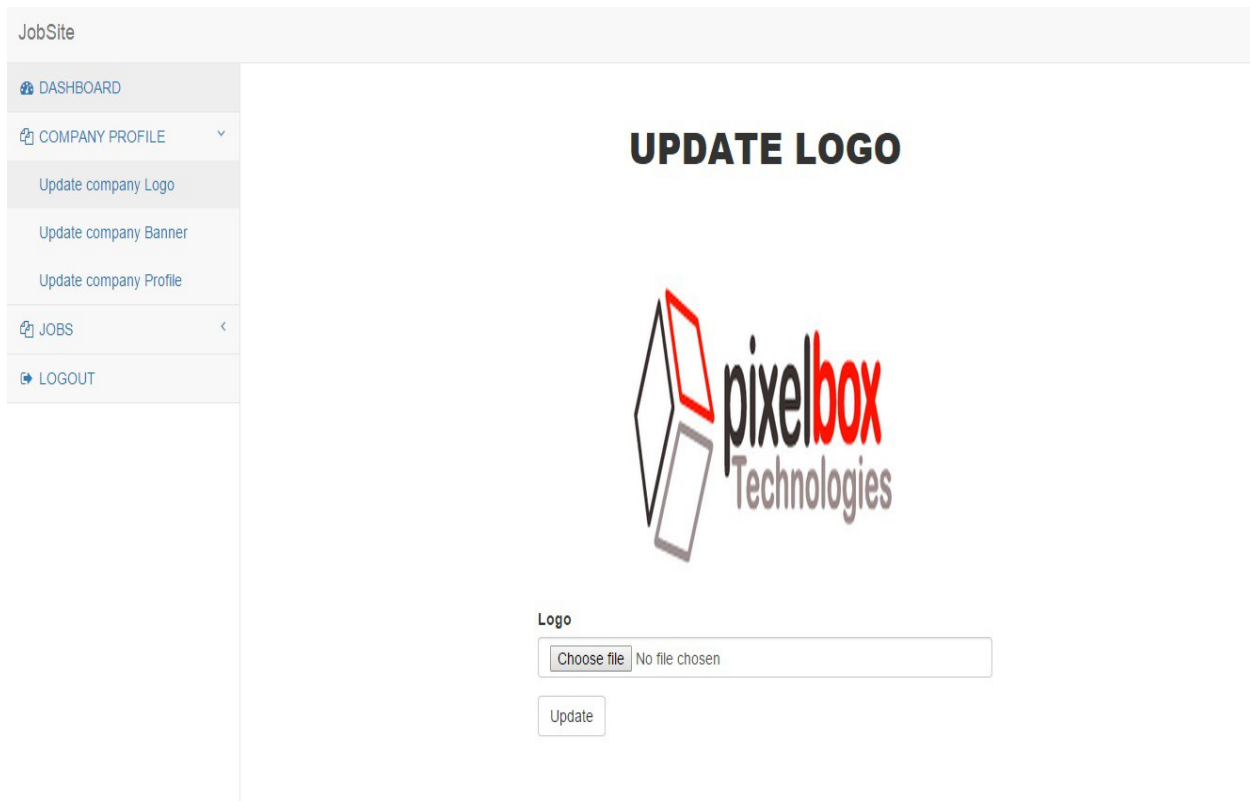

Figure 4.5: Employer's company logo

**Description:** This is the employer's company logo for jobsite system. In the left side of the view, the dashboard is given. An employer's logo page shows the logo updating page of their company and in the bottom there shows the logo can be update if company wants to perform that action. [5]

#### 4.2.6 Employer Company Banner

The employer's company banner of the jobsite system is shown in figure 4.6

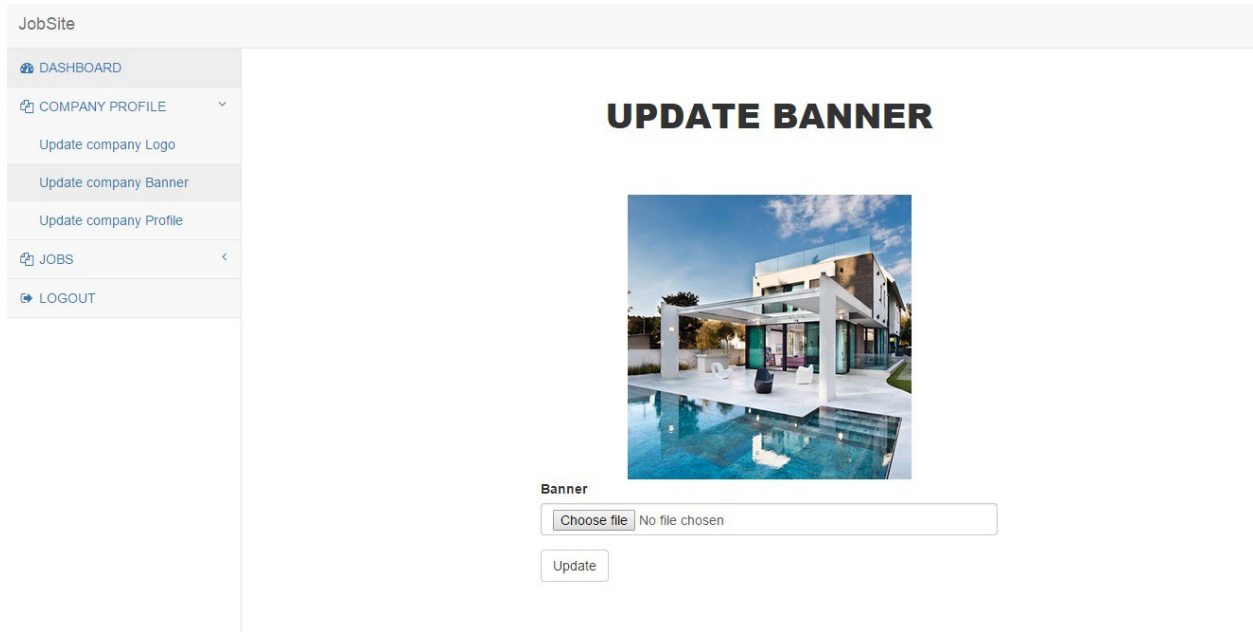

Figure 4.6: Employer’s company logo

**Description:** This is the employer’s company banner for jobsite system. In the left side of the view, the dashboard is given. An employer’s banner page shows the banner updating page of their company and in the bottom there shows the banner can be updated if company wants to perform that action. [5]

#### 4.2.7 Employer’s Company Profile Update

The employer’s company Profile Update page of the jobsite system is shown in figure 4.7

**UPDATE PROFILE**

# Conclusion and Future Work

## 5.1 Conclusion

Bangladesh is a developing country. Many developing countries are using information communication technology for different sector such as job sector. In our country online job service is popular to almost all people. But the efficiency of searching a candidate from a huge list of CV and the proper effectiveness of web application is not properly done. Through the developed project, anyone can visualize the effectiveness and efficiency in the real life. It is very helpful for computerization or doing automation of a personal information management system. This program helps reduce the manual method and stress which is done by a person and that is time consuming and lengthy process. Nothing taste good than solving your problem from distance rather than rushing down to a specific point for the problem to be solved. With this application user's information are stored very efficiently in a secured database. Trend of information improvement in the generation has improved the quality and services of human operation just as the case of this application for job services has reduce the mobility rate of human and improve their standard of database storage.

## 5.2 Future Work

The future plan of this project is to improved design; implementation and documentation in such a way that anyone can use this project for better perform. I will develop the site more dynamically. In future I will add the following module for better improvement of the project:

- Online Account verification.
- Online notification for candidates for specific job category they searching for jobs.
- Mobile version of the existing jobsites.
- Online sms service for company holder which they can send candidates for final selection.
