Research Supervisor

Dr. Shamsun Nahar khan

(Postdoc Harvard, USA)

Associate professor and Chairperson

Department of Pharmacy

East West University

Date of Submission: 30th July, 2016

This Thesis Paper is submitted to the Department of Pharmacy, East West University, Bangladesh, in partial fulfillment of the requirements for the Degree of Masters of Pharmacy.

This Research paper is dedicated to my beloved Mother

DECLARATION BY THE CANDIDATE

I hereby declare that this dissertation, entitled "Pharmacological and Toxicological study of Medicinally Important Plants: *Solanum virginianum*" is an authentic and genuine research work carried out by me under the guidance of Dr. Shamsun Nahar Khan (Ph. D, Postdoc, Harvard University, Chairperson, Department of Pharmacy, East West University, Dhaka).

ID # 2014-1-79-033

Department of Pharmacy
East West University, Dhaka.

ENDORSEMENT BY HEAD OF THE DEPARTMENT

This is to certify that the dissertation entitled "Pharmacological and Toxicological study of Medicinally Important Plants: Solanum virginianum" is a genuine research work carried out by , Fatema Akther under the supervision of Shamsun Nahar Khan (Ph. D, Postdoc, Harvard University, Chairperson, Department of Pharmacy, East West University, Dhaka). I further certify that no part of the thesis has been submitted for any other degree and all the resources of the information in thus connection are duly acknowledged.

Dr. Shamsun Nahar Khan

Ph. D, Postdoc, Harvard University Associate Professor and Chairperson Department of Pharmacy East West University

CERTIFICATE

This is to certify that, the research work on "Pharmacological and Toxicological study of Medicinally Important Plants: *Solanum virginianum*" submitted to Department of Pharmacy, East West University, Jahurul Islam city, Aftabnagar, Dhaka-1212, in partial fulfilment of the requirements for the degree of Masters of Pharmacy (M.Pharm) was carried out by Fatema Akther (ID: 2014-1-79-033) under the guidance and supervision and that not part of thesis has been submitted for any other degree. We further certify that all the sources of information of this connection are duly acknowledged.

.....

Dr. Shamsun Nahar Khan

Ph. D, Postdoc, Harvard University

Associate Professor and Chairperson

Department of Pharmacy

East West University,

Aftabnagar, Dhaka-1212

ACKNOWLEDGEMENT

Above all, I express my gratitude to Almighty Allah for giving me the strength, energy and patients to carry out this research work. I would like to express my gratitude and admiration to **Dr. Shamsun Nahar Khan**, Associate Professor and Chairperson, Department of Pharmacy, East West University, for his suggestion, careful guidance, sincere help, constructive criticism and valuable time without which I would not have been able to complete this work. He had been very enthusiastic and supportive in my research.

I would like to convey deepest love and obedience to my parents for their support, inspiration and guiding me all through my life until today, which keeps me strong and firm to do the things I needed to do.

I would also like to take the opportunity to express my whole hearted gratitude to my fellow researcher friends specially Mohammad Ali, Sweety, Nusrat and near and dear ones who offered encouragement, information, inspiration and assistance during the period of constructing the research report.

I am thankful to the laboratory instructors for their kind support during the laboratory work.

ABSTRACT

The research work was carried out to determine the Pharmacological and **Purpose:**

Toxicological study of Medicinally Important Plants: Solanum virginianum.

Method: Methanolic extract was administered orally to the animal model (Swiss albino) and

the effects were determined by comparing with respect to control group which were

treated with 5% CMC. For every experiment positive control was used. Different experiments

were used to determine the pharmacological profile which was Collected from

internationally published publications and journals.

Result: The CNS activity was evaluated by open field method and hole board test. In the open

field method and hole board experiment the crude extract of Solanum virginianum. (200mg/kg,

400mg/kg & 800mg/kg) dose dependently reduces the number of peripheral locomotion, central

locomotion and leaning in the open field test and reduces the number of head dipping and head

poking in the hole board test. The reduction is significant when it is compared to the standard

drug.

The aim of the study was also to investigate the possible toxicity of the plant Solanum

virginianum and especially to establish the safety of the methanolic extract of this plant by

focusing on its chronic toxicity in mice. For finding chronic toxicity several tests are done such

as CBC (Cell Blood count) test, Hepatic enzyme test and histopathological Studies.

All data were analyzed by using SPSS analytical method.

Conclusion: After summarize all the results it can say that Solanum virginianum may have

several pharmacological activities but to prove the hypothesis it need further higher

studies.

Keywords: Solanum virginianum, Neuropharmacological effect and Toxicity test.
